CT813x

Integrated Omnipolar TMR Digital Latches

FEATURES AND BENEFITS

- Sensitivity with B_{OP} range: 9 to 70 G
- Ultra-low power consumption: ~110 nA @ V_{DD} = 1.8 V and f_S = 2 Hz
- Supply voltage range: 1.7 to 5.5 V
- Sensor polarity: omnipolar
- Digital CMOS outputs:
  - □ Push-pull
  - □ Open drain
- Undervoltage lockout (UVLO)
- Package options:
  - □ 3-lead SOT23
  - □ 4-lead LGA, 1.45 mm × 1.45 mm × 0.44 mm

APPLICATIONS

- IoT devices
- Smartphones, tablets, and laptops
- Door or lid closure
- Reed switch replacement
- Tamper-proofing for utility smart meters
- Fluid level sensing/detection
- Proximity detection
- Motor controllers
- Gimbals for camera systems in drones/UAVs
- Industrial machinery/robots
- Medical devices

DESCRIPTION

The CT813x series of omnipolar tunnel magnetoresistance (TMR) digital latches are designed for consumer and industrial applications. The devices are based on Allegro patented XtremeSense™ TMR technology with integrated CMOS process to provide a monolithic solution for superior sensing performance. The CT813x digital latches offer stable magnetic operation over the operating temperature range.

This product family has very low power consumption—as low as 110 nA—which is ideal for battery-operated products where minimal current consumption is required. The devices support magnetic fields down to 9 G for applications where there is a large air gap requirement.

For applications that require a very small form factor and low profile, the CT813x is assembled in a 4-lead LGA package. They are also available in an industry-standard 3-lead SOT-23 package to support high-volume manufacturing for industrial markets.

PACKAGE:

3-lead SOT-23

Not to scale.

[1] Stresses exceeding the absolute maximum ratings may damage the CT813x and may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. Allegro does not recommend exceeding or designing to absolute maximum ratings

[1] The Recommended Operating Conditions table defines the conditions for actual operation of the CT813x. Recommended operating conditions are specified to ensure optimal performance to the specifications. Allegro does not recommend exceeding them or designing to absolute maximum ratings.

THERMAL CHARACTERISTICS

Characteristic	Symbol	Test Conditions		Value	Unit
Junction-to-Ambient Thermal Resistance	$R_{\theta JA}$	Junction-to-ambient thermal resistance is a function of application and board layout and is determined in accordance to JEDEC standard JESD51 for a four (4) layer 2s2p FR-4 printed circuit board (PCB) with 2 oz. of copper (Cu) and 4 oz. of copper (Cu) or more for 65 A. Special attention must be paid not to exceed junction temperature $T_{J(MAX)}$ at a given ambient temperature T_A.	SOT23-3	202	°C/W

FUNCTIONAL DESCRIPTION

Overview

The CT813x is a product family of omnipolar TMR magnetic latches that supports a wide operating voltage range of 1.7 to 5.5 V and is capable of providing two digital output configurations: open drain or push-pull. These omnipolar TMR digital latches are designed to consume a minimal amount of current which is ideal for battery-operated products. It also supports a wide range of sensitivity levels for various applications.

Undervoltage Lockout (UVLO)

The Undervoltage Lockout protection circuitry of the CT813x is activated when the supply voltage (V_{DD}) falls below 1.53 V. The CT813x remains in a low quiescent state and the $\overline{OUT}$ output is not valid until V_{DD} rises above the UVLO threshold (1.60 V).

Power-On Time (t_{ON})

The Power-On Time (t_{ON}) of 50 µs is the amount of time required by the CT813x to start up, power-on, and acquire the first sample. The chip is fully powered up and operational from the moment the supply voltage passes the rising UVLO point (1.60 V). This time includes the ramp-up time and the settling time (within 10% of steady-state voltage under an applied magnetic field) after the power supply have reach the minimum V_{DD}.

APPLICATIONS INFORMATION

A decoupling capacitor, C_{BYP}, between the supply voltage (VDD) and ground (GND) is required to lower the noise going into the CT8131 as well as providing isolation from the other circuits. The decoupling capacitor should be placed close to the TMR digital latch. A typical capacitor value of 1.0 µF (ceramic) will be sufficient. A pull-up resistor of 47 kΩ connected from OUT to the system voltage (V_{SYS}) is required for the CT8131.

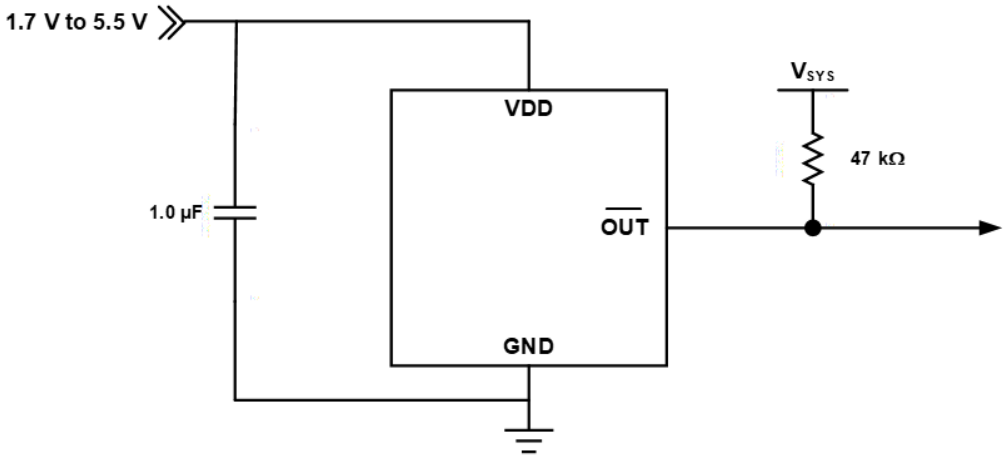

Figure 47: CT8131 Application Block Diagram

Like the CT8131, the CT8132 products require a 1.0 µF (ceramic) bypass capacitor to be connected between the supply voltage and ground.

[1] RoHS is defined as semiconductor products that are compliant to the current EU RoHS requirements. It also will meet the requirement that RoHS substances do not exceed 0.1% by weight in homogeneous materials. Green is defined as the content of chlorine (Cl), bromine (Br), and antimony trioxide based flame retardants satisfy JS709B low halogen requirements of ≤ 1,000 ppm.
[2] MSL Rating = Moisture Sensitivity Level Rating as defined by JEDEC standard classifications.
[3] Package will withstand ambient temperature range of –40°C to 150°C and storage temperature range of –65°C to 150°C.
[4] Device Marking for SOT23 is defined as XZ YWWS where XZ = part number nominator, Y = year, WW = work week, and S = sequential number. LGA is defined as X where X = part number nominator and YZ = date code information.
